**AIRFLAPS**

TM

WorldWide Patent

There are inventions which, without necessarily revolutionizing our life, make it much simpler. This is the case with **AIRFLAPS**.

In motorcycle off-road, who has never been in a situation of needing to ventilate his mask, to evacuate the fog or dry his foam dripping with sweat, without having the time to stop or taking the risk of removing it ?

**AIRFLAPS** meets this need in a simple and effective way with a universal product that suits all helmet/mask combinations.

Already adopted by the world champions Antonio CAIROLI, Christophe CHARLIER and many others, it will become indispensable in your MX sessions and off-road outings.

## AIRFLAPS:

**performance, comfort, safety !**

**AIRFLAPS** allows the pilot to increase ventilation inside the mask. This additional air supply allows the system to fight against the formation of condensation or overheating inside the mask and, indirectly, under the helmet.

### ✓ Anti heat

Off-road is a physical sport where the pilot is confronted with the heat problem, especially the forehead and eyes, causing perspiration, disturbing vision and making the foam wet, uncomfortable and irritating.

### ✓ Anti fog

Same causes, different effects in cold weather. The perspiration released by the face turns into mist on the inside of the screen. Unable to see properly, the driver will have as a last resort to remove his mask.

In either case, the vision, performance, comfort and safety of the driver are directly impacted.

Thanks to a worldwide patented system, **AIRFLAPS** allows, with a single hand while riding, to overcome all these drawbacks.

# **AIRFLAPS**

GOOD TO KNOW

✓ In enduro, where the formation of fog is frequent, **AIRFLAPS** saves you from having to take off the mask, and thus spares you the risk of serious ocular lesions.

✓ In motocross, in addition to avoiding you fog and heat, **AIRFLAPS** keeps the mask protected under the visor in case of rain at the start.

✓ In rally **AIRFLAPS** relieves the pressure of the mask on the face at high speed.

✓ Other practical aspect, **AIRFLAPS** allows you to put on and take off your helmet without removing the mask.

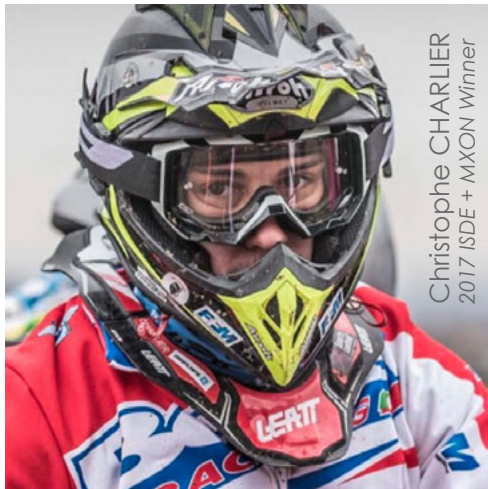

# AIRFLAPS™

GOOD TO KNOW

- ✓ With its double face 3M (the same as GoPro), requires no transformation that could affect the performances of the helmet.
- ✓ AIRFLAPS is compatible with Roll-Off and Tear-Off.
- ✓ In closed position AIRFLAPS does not alter the tightness of the mask on the face.
- ✓ To remove the AIRFLAPS system from the helmet, simply unscrew the flaps of their bases.
- ✓ Thanks to a simple adjustment screw, the distance between the mask and the face can be adjusted easily by 10mm.
- ✓ Space and weight reduced to the maximum (2 x 28 grams), no impact on the cervical fatigue of the pilot.
- ✓ Adhesive mounts sold separately allow thanks to a single kit to equip several helmets.
- ✓ Do you prefer the handling leg at the bottom rather than the top ? No need to take off the adhesive mounts : unscrew the flaps and swap left and right sides.
